Mustafa Tufan Software Engineer

Hi! I am Mustafa, a software engineer with finance-related master degree. I am always in pursuit of designing the best software & writing the best line of codes. I am passionate about details, continuously think about how to improve myself, where I am & what I do. I am obsessive on three subjects: product, best practices, and teamwork.

With the product, I mean the customer. In the end, all of that hard work is for the customer that uses our product. Customer feedback is always enough indicator to begin to work on the issue for me.

With the best practices, I don't mean the first result on Google. I mean the result that matches our product most.

With the teamwork, I mean feedback oriented company culture. I am always open to feedback and, also I believe being open to feedback is essential to survive in business.
